

DATA ACQUISITION & RACE ENGINEER

Carmel, Indiana | 917-515-0451 | griffyellin@outlook.com | gyracing.com

PROFILE

Race engineer and competitive driver. Hands-on F4 experience with GEMS ECU, Cosworth Pi, and AIM. Graduated top of class from the Motorsport Technical School DAG program: data acquisition, vehicle dynamics, tire science, aerodynamics, suspension, race strategy. Build custom data and setup tools. Driver's instinct for translating feel into data.

ENGINEERING EXPERIENCE

Race Engineer & Interim Shop Manager / *Berg Racing — F4 / USF Junior Program* May 2026 – June 2026

- Engineered driver to P2 in Race 1: the team's first podium, first event in the series, and first weekend on the JSF4 chassis.
- Lead race engineering on all four Ligier JSF4 cars at race weekends: setup, run plans, fuel and tire strategy, GEMS data acquisition and analysis, corner weight verification, and live driver feedback. Apply wet-weather setup changes on tight turnarounds.
- Primary point of contact between drivers and mechanics on pit lane; review data and onboard footage with drivers and coaches between sessions to inform setup direction.
- Run shop operations for the team's five-car fleet (4× Ligier JSF4, 1× USF Junior) on monthly site visits: build, prep, scheduled maintenance, parts and tool organization, and standard operating procedures.

US Performance Engineering Course Coordinator / *Motorsport Technical School* Aug 2026 – Present

- Selected by MTS leadership to run the 8-week US Performance Engineering course: the single point of coordination between the Italy-based school, its instructors, and the Indianapolis student cohort.
- Plan and publish each weekend's program: confirm instructor availability, coordinate travel, and manage lesson tracking. Teach as a junior instructor on sim, data, and track days and organize visits to Dallara, Xtrac, and IMSA teams.

Race Engineer (Lead) / *Motorsport Technical School — Ligier JSF4 F4* Apr 2026

- Rebuilt and reorganized the JSF4's wiring loom and harness, serviced all engine and chassis connectors, contributed to a full engine swap, and monitored HPD engine parameters through first crank and initial startup.
- Built the team's engineering document stack in Excel: run plan, setup sheet, driver procedure, lap and tire trackers, engine break-in tracker, spare parts manifest, and driver feedback sheet, plus a live setup configuration app at gysetupconfig.netlify.app, now in active use at Berg Racing.

Coach / Spotter / *ENVE Motorsports — USF Pro Championships* Oct 2025

- Coached alongside the team across a test weekend, supporting setup direction and driver development.

Floater Mechanic / *TJ Speed Racing — USF Pro Championships* Oct 2025

- Ran floating crew duties across a race weekend: set up the pit cart, loaded and unloaded trailers, and supported car prep and session turnarounds.

DRIVING CAREER

Racing Driver / *Jay Howard Driver Development — USF Pro Championships* 2024

- Competed on the Road to Indy ladder; built driver-engineer communication and setup discipline from the cockpit.

Test Driver / *ENVE Motorsports* 2024–2025

- Delivered technical feedback for setup development across test sessions.

Student Driver / *Skip Barber Racing School* 2023–2024

- Progressed through the full Formula 4 curriculum across two seasons.

EDUCATION

Motorsport Technical School / *Performance Engineer Program* Graduated April 2026

- **Graduated top of class.** Intensive race engineering curriculum: data acquisition & sensor theory, vehicle dynamics (tire load sensitivity, LSTM bicycle model), aero balance, suspension setup, powertrain analysis, race strategy. Hands-on with GEMS ECU, AIM systems, and Cosworth Pi Toolbox on the Ligier JSF4 platform.

The Dalton School / *New York, NY* Class of 2024

TECHNICAL SKILLS

DATA & DAQ

GEMS ECU · Cosworth Pi Toolbox · AIM Systems · iRacing · WinTax · Custom tool development

MECHANICAL & ELECTRICAL

Engine build · Wiring harness · ECU startup · HPD F4 / JSF4

VEHICLE DYNAMICS & ENGINEERING

Tire science · Suspension setup · Aero balance · Powertrain · Race strategy

SYSTEMS & PERFORMANCE

PC hardware · Sim build · MS Office · IndyCar PitFit training
